

Heena Tibadiya

Full Stack Engineer

Email: tibadiyaheena1994@gmail.com | Phone: (848) 467-6093 | [LinkedIn](#) | [Portfolio](#)

PROFILE

Full Stack Engineer with 8+ years of experience specializing in US Tax and Healthcare systems, with strong expertise in building scalable, secure, and enterprise-grade applications. Proficient in Angular, React, Node.js, Java Spring Ecosystem, and Kafka, with a proven track record of modernizing legacy applications, developing high-performance user interfaces, and building resilient backend services. Experienced in micro-frontends, event-driven architecture, API development, performance optimization, and cloud deployments. Strong technical leadership in establishing engineering best practices, driving code quality, and delivering reliable solutions across the full software development lifecycle.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, HTML5, CSS3

Frontend: React, Angular, Web Components, Micro-frontends, Tailwind, Bootstrap 5, Material UI

Frontend Libraries: Zustand, Redux, Axios, TanStack Query, NgRx, RxJS, React Hooks, Lazy Loading, Code Splitting, Virtualization, Memoization

Backend & APIs: Node.js, Express.js, Java & Spring Ecosystem, Python FastAPI, Micro-services, REST APIs, OAuth 2.0, Websockets

Databases & Messaging: PostgreSQL, MongoDB, Couchbase, Elasticsearch, Kafka, IndexedDB

Testing Libraries: Playwright, Vitest, Jest, JUnit

Cloud & DevOps: GCP, AWS, Docker, Kubernetes, CI/CD, Kibana, Spinnaker

Tools: Git, Figma, Postman, VS Code, NPM, IntelliJ IDEA

Soft Skills: Engineering Leadership, Agile/Scrum, Mentorship, Cross-functional Collaboration

Domain: financial software (US tax, payments & billing) and Healthcare

EDUCATION

MS in Computer Science — City University of New York (CUNY), New York, NY

August '24 – May '26

BSc & MSc in Computer Applications & IT — KSSBM, Gujarat University, Ahmedabad, India

July '11 – May '16

PROFESSIONAL EXPERIENCE

Lead Software Developer | [Inventyv Software Services](#)

June '21 – August '24

- Led a cross-functional team of 6+ **engineers throughout the SDLC**, driving Agile practices, code reviews, technical collaboration, and quality-focused release processes to deliver reliable software.
- Led the **end-to-end development of a high-revenue Bank-as-a-Service (BaaS) module**, enabling EROs to provide direct financial services to taxpayers for secure tax refund disbursements, from frontend workflows through backend APIs and financial integrations.
- Engineered an ERO enrollment pipeline using **React, Node.js, and Couchbase**, with **Node.js background jobs** for automated processing and secure document transmission to banking partners.
- Implemented an **event-driven architecture** using **Kafka** for the banking module, enabling asynchronous communication with third-party financial APIs and processing responses reliably while decoupling services and improving system resilience.
- Spearheaded the complete rewrite of the enterprise **e-file module using React and Node.js**, engineering a dynamic workflow that enabled users to selectively transmit specific IRS and state tax forms through secure backend APIs.
- Developed a **white-label Service Bureau portal** using React and Node.js, enabling businesses to create master accounts, provision and manage child customers, and customize branding with their company name and logo.
- Provided **production support** throughout the tax season, **troubleshooting** and **resolving customer-reported issues** and support tickets to ensure reliable system operations and minimize disruptions.
- Integrated **IBM Watson AI** into the Solution Center to deliver accurate tax article recommendations, reducing customer tickets by 70%.

Senior Software Developer | [Inventyv Software Services](#)

June '18 – May '21

- Engineered a **secure taxpayer client portal** using React and Node.js, enabling seamless document uploads to EROs; streamlined RESTful API intake workflows and improved frontend performance through Zustand state management, lazy loading, and code splitting.
- Developed healthcare application to capture and record physical machine readings, delivering personalized data views for members; implemented i18n support for multi-language accessibility.
- Decomposed **monolithic** frontend applications into micro-frontends using Webpack 5 Module Federation, enabling parallel development and accelerating independent feature delivery.
- Migrated an AngularJS application to modern Angular, **optimizing performance** through cache-first serving, AOT compilation, and lazy loading; reduced load times by 40% and improved rendering performance by 35%.

- Implemented **JWT authentication with access and refresh tokens** across the frontend and Node.js backend, handling token validation, expiration, refresh flows, protected routes, and secure API authorization.
- Integrated the **BillingTree payment gateway** and automated annual customer renewal workflows, reducing manual payment processing by 40% and streamlining recurring payments.
- Implemented CDN-based caching for static files used in tax-form printing and calculations, improving asset delivery performance and reducing backend server load.
- Collaborated with **DevOps** to manage GCP deployments, leveraging Kibana for real-time log monitoring, production troubleshooting, and proactive issue resolution.
- Partnered with **product and design teams** to translate requirements into polished UI/UX using Figma and modern frontend frameworks.
- Established and enforced coding standards, led peer code reviews, and integrated automated testing with Vitest and Jest into the CI/CD pipeline to improve code quality, reliability, and development efficiency.

Software Developer | I-Link InfoSoft

May '16 – May '18

- Designed and developed scalable **CRM** features using Node.js and React, streamlining customer support workflows and improving the management of customer data.
- Worked on a custom **Electron Desktop Printing Tool** using Angular 2, jCanvas, and Spring Boot APIs to dynamically map taxpayer data to SVG-based form elements and automate the generation and printing of IRS and state tax forms.
- Developed responsive, **reusable UI components** in Angular, integrating seamlessly with backend microservices to deliver scalable and maintainable applications.
- Contributed across the full **software development lifecycle**, from requirements gathering and solution design through development, testing, and production release.

ACADEMIC PROJECTS

- **Agentic AI Resume Screening & Feedback System** — *React.js, Node.js, LangChain.js, Llama 3.2* Spring '26
Designed and built a full-stack AI web application that evaluates resumes against job descriptions using a three-agent pipeline (Parser → Matching → Feedback). The system generates a transparent match score with actionable improvement suggestions, showcasing applied expertise in LLMs, agentic workflows, and modern full-stack development.
- **Personal Vault & Finance Management System** — *FastAPI, Angular, PostgreSQL* Fall '25
A full-stack personal productivity app built with Angular and FastAPI that helps users securely store passwords and manage everyday expenses in one place — combining a credential vault with budget tracking to simplify daily financial and digital life. Implemented with JWT-based authentication, RESTful APIs, PostgreSQL, and a responsive Angular UI.
- **Secure Chat Application** — *Java, Spring Boot, WebSocket, ECDH, REST APIs* Spring '25
Built a Spring Boot-based secure chat app with WebSocket integration, implementing ECDH key exchange for real-time encrypted messaging. Built backend services with Spring Boot and enable real-time message encryption/decryption using WebSocket.
